Learn About New Composites Training Program

An open house presentation about a new Composites Technician career program will be held December 20 at the Georgetown Campus of South Seattle Community College.

The six-month training program prepares technicians for manufacturing careers in the aviation industry. Topics in the 45-credit certificate program include fabrication, assembly, and repairing composite material on aircraft at an entry level. Required math and English skills are built into the program.

South is launching the new program as part of the National STEM Consortium, a multimillion dollar grant through the U.S Trade Adjustment Act Community College Career Training Program.

The first training session begins January 7, 2013 and ends on June 14, 2013.
