LIFT YOURSELF TO A NEW CAREER!

The South Seattle College Diesel and Heavy Equipment Technology program will prepare you for family-supporting wages in an industry that's always in need of skilled workers, both in the U.S. and internationally. Our ASE-based training is certified to the latest NATEF standards, and will prepare you for all aspects of diesel and heavy equipment repair.

Technicians learn skills to:
- Repair and maintain trucks, buses, construction equipment, ships, trains, generators, tractors, power equipment and farm machinery.
- Use laptop computers and scan tools to access fault codes and make accurate diagnosis of the problem. Technicians frequently use electrical multi-meters, pressure gauges and flow meters to find the cause of mechanical failures. They replace worn and defective parts and test equipment prior to returning it to service.
- Work indoors, but occasionally work outside if a vehicle needs repair on the road or at a job site.
- Follow proper safety procedures.

“Thanks to the wisdom and guidance of my teachers, I received the education needed to secure a career in a field that is in high demand. I have successfully rejoined the workforce and look forward to a long career in the mechanical arts.”

~ Ahmed J. Andrews

DEGREE OPTIONS OFFERED

Diesel and Heavy Equipment Technology
Certificate - 4 quarters

Diesel and Heavy Equipment Technology
AAS/AAS-T Degree - 1 year, 6 months

START HERE, GO ANYWHERE!

Students and graduates of the Diesel and Heavy Duty Equipment Program at South continue to be successful securing employment in the following industries:
